

Antonello Di Pede

Cybersecurity Engineer

📞 (+33) 07 43 60 64 18 | ✉️ antonello.di-pede@eurecom.fr | 📁 Portfolio | 🌐 LinkedIn

SUMMARY

Computer and Cybersecurity Engineer with a Double MSc nearly complete between Politecnico di Torino and EURECOM. Background spanning software development, networking, and machine learning, with growing hands-on experience in offensive security – from hardware side-channel attacks to enterprise security testing. Building toward a career in penetration testing and deep network security. Solution-focused and proactive, I work best under pressure and enjoy learning new things.

EDUCATION

EURECOM

Diplôme Ingénieur in Digital Security
• Expected Final GPA: 4.0/4.0

Biot, France
Sep. 2025 – Ongoing

Politecnico di Torino

Master of Science in Cybersecurity
• Expected Final GPA: 4.0/4.0

Turin, Italy
Sep. 2024 – Ongoing

Politecnico di Torino

Bachelor of Science in Computer Engineering
• Final GPA: 3.614/4.0 (107/110)

Turin, Italy
Sep. 2021 – Sep. 2024

I.I.S. G.B. Pentasuglia

High School Diploma – Computer Science and Telecommunications
• Final GPA: 3.9/4.0

Matera, Italy
Sep. 2015 – Jun. 2020

EXPERIENCE

Cybersecurity Intern – Security Testing and Open Source Software Security

SAP Labs France

Sep. 2026 – Present
Mougins, France

SW & HW Technician

B.M. del dott. Battista Masellis

Jun. 2017 – Sep. 2024
Matera, Italy

- Diagnosed and repaired smartphones, computers, and electronic devices in a technical repair shop
- Configured customized-built computers and set hardware settings to customers' specifications
- Provided technical support, communicating complex issues clearly to non-technical customers
- Developed problem-solving skills, flexibility, and high performance under pressure

PROJECTS

Side-Channel Power Attack against ASCON-AEAD128 – Mark: 19.5/20

Hardware Security – EURECOM Semester Project

Feb. 2026 – Jun. 2026

C, Python, ChipWhisperer Husky, ARM Cortex-M4

- Implemented ASCON-AEAD128 (NIST SP 800-232) firmware in C on a SAM4S ARM Cortex-M4 microcontroller
- Acquired power traces via ChipWhisperer Husky and applied Correlation Power Analysis (CPA) to recover the secret key
- Designed and evaluated software countermeasures (masking, shuffling) to mitigate the attack

AI/ML Methods for UE Positioning in 5G O-RAN Framework – Mark: 18/20

Research – EURECOM Semester Project

Sep. 2025 – Feb. 2026

Python, PyTorch, FlexRIC, OpenAirInterface

- Research on AI/ML-based localization in 5G Open RAN systems using CSI data from gNBs processed by the Near-RT RIC
- Developed a VAE-based NLoS anomaly detection model for UWB localization
- Achieved 97% NLoS detection accuracy and ~25% improvement in tracking precision
- Implemented C++ TorchScript inference pipeline integrated as an xApp within the FlexRIC framework

NXP S32K3X8EVB QEMU Emulation – Mark: 30/30

Computer Architecture & Operating Systems – Politecnico di Torino

Sep. 2024 – Feb. 2025

C, QEMU, FreeRTOS, ARM Cortex-M7

- Implemented emulation of the NXP S32K3X8EVB board inside QEMU, including UART, GPIO, and FreeRTOS integration
- Extended QEMU's ARM Cortex-M7 support and prototyped a Memory Protection Unit (MPU) emulation module

SKILLS, CERTIFICATIONS & HONORS

Programming Languages: Python, C, C++, Java, SQL, Bash, JavaScript, HTML/CSS, MATLAB

Security & Networking: Information Security, System Security, Network Protocols, Malware Analysis

AI/ML: PyTorch, Scikit-learn, NumPy, Pandas, TorchScript, Deep Learning, Probabilistic ML

Tools & Platforms: Git, GitHub, GitLab, Docker, Linux, QEMU, LaTeX, Overleaf

Languages: Italian (Native), English (Fluent), French (Basic)

Certifications: ECDL Full Standard | ECDL IT-Security | MOS (Microsoft Office Specialist) | Project Management Fundamentals (EURECOM) | Fortinet NSE 1 | Fortinet NSE 2 | Fortinet NSE 3

Honors: Top Best Student, EURECOM (Fall 2025) – Awarded the highest academic recognition given across the entire EURECOM student cohort for the semester
