

SUMMARY

Computer Engineer and MSc Student in Cybersecurity at Politecnico di Torino and EURECOM with a keen interest in information security and cybersecurity. Experienced in software development, networking, system security, and machine learning. Solution-focused and proactive, I work best under pressure and enjoy learning new things.

EDUCATION

EURECOM <i>Diplôme Ingénieur in Digital Security</i> Expected Final GPA: 4.0/4.0	Biot, France Sep. 2025 – Ongoing
Politecnico di Torino <i>Master of Science in Cybersecurity</i> Expected Final GPA: 4.0/4.0	Turin, Italy Sep. 2024 – Ongoing
Politecnico di Torino <i>Bachelor of Science in Computer Engineering</i> Final GPA: 3.614/4.0 (107/110)	Turin, Italy Sep. 2021 – Sep. 2024
I.I.S. G.B. Pentasuglia <i>High School Diploma – Computer Science and Telecommunications</i> Final GPA: 3.9/4.0	Matera, Italy Sep. 2015 – Jun. 2020

EXPERIENCE

Cybersecurity Intern – Security Testing <i>SAP Labs France</i>	Sep. 2026 – Present Mougins, France
SW & HW Technician <i>B.M. del dott. Battista Masellis</i> - Diagnosed and repaired smartphones, computers, and electronic devices in a technical repair shop - Configured customized-built computers and set hardware settings to customers' specifications - Provided technical support, communicating complex issues clearly to non-technical customers - Developed problem-solving skills, flexibility, and high performance under pressure	Jun. 2017 – Sep. 2024 Matera, Italy

PROJECTS

Side-Channel Power Attack against ASCON-AEAD128 – Mark: 19.5/20 <i>Hardware Security – EURECOM Semester Project</i> - Implemented ASCON-AEAD128 (NIST SP 800-232) firmware in C on a SAM4S ARM Cortex-M4 microcontroller - Acquired power traces via ChipWhisperer Husky and applied Correlation Power Analysis (CPA) to recover the secret key - Designed and evaluated software countermeasures (masking, shuffling) to mitigate the attack	Feb. 2026 – Jun. 2026 C, Python, ChipWhisperer Husky, ARM Cortex-M4
AI/ML Methods for UE Positioning in 5G O-RAN Framework – Mark: 18/20 <i>Research – EURECOM Semester Project</i> - Research on AI/ML-based localization in 5G Open RAN systems using CSI data from gNBs processed by the Near-RT RIC - Developed a VAE-based NLoS anomaly detection model for UWB localization - Achieved 97% NLoS detection accuracy and ~25% improvement in tracking precision - Implemented C++ TorchScript inference pipeline integrated as an xApp within the FlexRIC framework	Sep. 2025 – Feb. 2026 Python, PyTorch, FlexRIC, OpenAirInterface
NXP S32K3X8EVB QEMU Emulation – Mark: 30/30 <i>Computer Architecture & Operating Systems – Politecnico di Torino</i> - Implemented emulation of the NXP S32K3X8EVB board inside QEMU, including UART, GPIO, and FreeRTOS integration - Extended QEMU's ARM Cortex-M7 support and prototyped a Memory Protection Unit (MPU) emulation module	Sep. 2024 – Feb. 2025 C, QEMU, FreeRTOS, ARM Cortex-M7

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Java, SQL, Bash, JavaScript, HTML/CSS, MATLAB

Security & Networking: Information Security, System Security, Network Protocols, Malware Analysis

AI/ML: PyTorch, Scikit-learn, NumPy, Pandas, TorchScript, Deep Learning, Probabilistic ML

Tools & Platforms: Git, GitHub, GitLab, Docker, Linux, QEMU, LaTeX, Overleaf

CERTIFICATIONS & LANGUAGES

- Languages:** Italian (Native), English (Fluent – IELTS 6.5/9), French (Basic)
- ECDL Full Standard | ECDL IT-Security | MOS (Microsoft Office Specialist)
